

BMW G30 5-series Front Camera Cover DIY

Here is the DIY for installing the 2017+ BMW G30 5-series front camera cover from Gloss Black to body color.
Before and after picture.

Tools needed:

- Flat screwdriver or pick

Step 1: Removing the Kidney Grill

- Take off the Kidney Grills to allow you accessing the cover.

Step 2: Removing the cover

- Use the flat screwdriver or pick (in my case, screwdriver works much better) to unclip the top part from each corner.

- Pull gently using your hand to undo the middle clips. One on each side.

- Once you have all of the top and middle clips undone, use your hand to pull forward the tip of the bumper that is holding the bottom of the cover in place. You may use a little force to clear the camera lens and the tip of the bumper.

Step 3: Install the painted cover in reverse and install the kidney grill back in place.

That's it and good luck on the DIY project.
